Mathematical models of many practical problems reduce to equations in which some terms are much smaller than others over most of the solution domain. Perturbation and asymptotic methods are formal approaches to simplifying the solution of such equation sets, often leading to approximate closed-form solutions.

familiarity with differential equations and
complex variables. The presentation begins
with a review of differential and difference
equations, then develops local asymptotic
methods for such equations, and explains
perturbation and summation theory before
concluding with an exposition of global
asymptotic methods.
