archaeological approach but one which also draws more widely on documentary material to examine how different people in the colony - from settler to slave - constructed identities through material culture." "This book is aimed primarily at archaeologists, but will also attract historians and those interested in cultural theory and material culture studies. Specifically, historical archaeologists and students of historical archaeology will be the primary readers of this volume."--Jacket.

Colonialism may have significantly changed the history of North America, but its impact on Native Americans has been greatly misunderstood. In this book, Neal Ferris offers alternative explanations of colonial encounters that emphasize continuity as well as change affecting Native behaviors. He examines how communities from three aboriginal nations in what is now southwestern Ontario negotiated the changes that accompanied the arrival of Europeans and maintained a cultural continuity with their pasts that has been too often overlooked in conventional "master narrative" histories of contact. In reconsidering Native adaptation and resistance to colonial British rule, Ferris reviews five

centuries of interaction that are usually read as a single event viewed through the lens of historical bias. He first examines patterns of traditional lifeway continuity among the Ojibwa, demonstrating their ability to maintain seasonal mobility up to the mid-nineteenth century and their adaptive response to its loss. He then looks at the experience of refugee Delawares, who settled among the Ojibwa as a missionary-sponsored community yet managed to maintain an identity distinct from missionary influences. And he shows how the archaeological history of the Six Nations Iroquois reflected patterns of negotiating emergent colonialism when they returned to the region in the 1780s, exploring how families managed tradition and the contemporary colonial world to develop innovative ways of

revising and maintaining identity. The Archaeology of Native-Lived Colonialism convincingly utilizes historical archaeology to link the Native experience of the eighteenth and nineteenth centuries to the deeper history of sixteenth- and seventeenth-century interactions and with pre-European times. It shows how these Native communities succeeded in retaining cohesiveness through centuries of foreign influence and material innovations by maintaining ancient, adaptive social processes that both incorporated European ideas and reinforced historically understood notions of self and community.

This volume examines human sexuality as an intrinsic element in the interpretation of complex colonial societies. While archaeological studies

of the historic past have explored the dynamics of European colonialism, such work has largely ignored broader issues of sexuality, embodiment, commemoration, reproduction and sensuality. Recently, however, scholars have begun to recognize these issues as essential components of colonization and imperialism. This book explores a variety of case studies, revealing the multifaceted intersections of colonialism and sexuality. Incorporating work that ranges from Phoenician diasporic communities of the eighth century to Britain's nineteenth-century Australian penal colonies to the contemporary Maroon community of Brazil, this volume changes the way we understand the relationship between sexuality and colonial history.

This book presents a theoretically informed, up-to-date study of interactions between indigenous peoples of Mediterranean France and Etruscan, Greek, and Roman colonists during the first millennium BC. Analyzing archaeological data and ancient texts, Michael Dietler explores these colonial encounters over six centuries, focusing on material culture, urban landscapes, economic practices, and forms of violence. He shows how selective consumption linked native societies and colonists and created transformative relationships for each. Archaeologies of Colonialism also examines the role these ancient encounters played in the formation of modern European identity, colonial ideology, and practices, enumerating the problems for archaeologists attempting to re-

This book employs the discipline of historical archaeology to study this process as it occurs in new and challenging environments. It tackles these questions not only in multiple dimensions of earthly space but also in a panorama of historical time. The book seeks to make the study of the past relevant to our globalized, post-colonized, and capitalized world.

This volume addresses the entanglement between archaeology, imperialism, colonialism, capitalism, and war. Popular sentiment in the West has tended to embrace the adventure rather than ponder the legacy of archaeological explorers; allegations by imperial powers of "discovering" archaeological sites or

"saving" world heritage from neglect or destruction have often provided the pretext for expanding political influence. Consequently, citizens have often fallen victim to the imperial war machine, seeing their lands confiscated, their artifacts looted, and the ancient remains in their midst commercialized. Spanning the globe with case studies from East Asia, Siberia, Australia, North and South America, Europe, and Africa, sixteen contributions written by archaeologists, art historians, and historians from four continents offer unusual breadth and depth in the assessment of various claims to patrimonial heritage, contextualized by the imperial and colonial ventures of the last two centuries and their postcolonial legacy.
