Chapter 8 The Nervous System Think of the nervous system as a computer – lots of twisted wires (nerve fibers) that all come together to form a power cable (bundle) which sends and receives signals. It all works together to enable the computer (body) to take in a message – send it to the circuit board (brain) – translate it so the computer (our mind) can act on the information it has received.

## Chapter 8-The Nervous System Flashcards

A chemical substance in the body tissues that facilitates the transmission of nerve impulses from one nerve to another. It has a stimulant (or excitatory) effect on some parts of the body (such as the skeletal muscles) and a depressant (or inhibitory) effect on other parts of the body (such as the heart muscle); also known as a neurotransmitter (ah-seh-till-KOH-leen)

## Chapter 8 The Nervous System Flashcards

Nervous system consists of special cells called nerve cells or neurons. It has a main cell body called cyton. It gives out many processes called dendrites. From it a very long process is given out. It is called axon or nerve fibre. The cell body has a nucleus.
