The drive toward comprehensive planning arises from various causes: from a distrust of the automatic working of the market mechanism and its ability to promote economic development; from a desire to assert national economic independence by government control of foreign trade and investment; and from the theories of economic development, fashionable during the 1950s, that emphasize the need for ...

This book introduces the interlocking disciplines of property and planning to economic theory and practice. Unlike any other available textbook, *The Economics of Property and Planning* skilfully introduces the reader to the interplay between property and planning using an economic lens. As resources become scarce, there is a growing need for students to understand the principles of economics in property and

planning. Especially given the rapid social, environmental, technological and political changes that are shaping places. The book begins with an outline of key economists and economic problems, then resources and scarcity, before examining macro and micro economic factors at play in property and planning. Furthermore, the book covers a variety of topics including spatial and locational modelling, fiscal approaches to redistribution, regeneration and renewal, and transport and infrastructure financing. There is also particular focus on contemporary issues such as climate change, environmental limits to economic growth, sustainability and resilience, and affordable housing. The book also introduces practical evaluation tools and appraisal. Plus a look at property and planning with respect to macro-economic objectives, policy, and new directions. With property and planning essential factors in economic thinking and

doing, this book provides insight into what future places will look like in real terms and how they will be shaped by policy. Targeted disciplines for the book include Economics, Planning, Property, Construction, Geography, Environmental Management, Sustainability, Housing, Built Environment, Land Economy, Urban Studies, Regional Studies, and Public Policy.

The debate around growth has been an important feature of economic planning in India since Independence. This book deals with the wide range of issues related to the country's growth and development between 1951 and 2011, covering the 11 Five Year Plans formulated and implemented during this period, as well as in the decade after that. The author traces the changing nature of planning over time—from rigid state control on economic activities, to reliance on market-based planning in the time of

economic reforms. He has dealt with the transition from growth measures in the 1970s, to the use of a mix of growth and redistribution in the 1980s, and the economic reforms and liberalization measures from 1991 onwards, and the inclusive growth we have seen in the twenty-first century. The central theme of the book is to analyse the role that planning played in maximizing the rate of economic growth and in improving the living standards of the people. Considering India's rapidly changing socio-economic environment, many of the issues around growth and development are contentious. The author discusses them here with academic rigour and an insider's insight, thus enabling a fair assessment.

This volume embodies a problem-driven and theoretically informed approach to bridging frontier research in urban economics and urban/regional planning. The authors focus on the interface between

these two subdisciplines that have historically had an uneasy relationship. Although economists were among the early contributors to the literature on urban planning, many economists have been dismissive of a discipline whose leading scholars frequently favor regulations over market institutions, equity over efficiency, and normative prescriptions over positive analysis. Planners, meanwhile, even as they draw upon economic principles, often view the work of economists as abstract, not sensitive to institutional contexts, and communicated in a formal language spoken by few with decision making authority. Not surprisingly, papers in the leading economic journals rarely cite clearly pertinent papers in planning journals, and vice versa. Despite the historical divergence in perspectives and methods, urban economics and urban planning share an intense interest in many topic areas: the nature of cities, the

prosperity of urban economies, the efficient provision of urban services, efficient systems of transportation, and the proper allocation of land between urban and environmental uses. In bridging this gap, the book highlights the best scholarship in planning and economics that address the most pressing urban problems of our day and stimulates further dialog between scholars in urban planning and urban economics.

How should India urbanize the cities and tackle the issues of their planning and economics? A key factor behind the poor urban planning in developing countries such as India is the lack of understanding of land, transport and urban economics. Due to this, urban planning models are majorly unsuccessful in addressing the issues of affordable housing, transport and other basic amenities for the urban poor numbering more than a quarter of urban

residents. Planning and Economics of Cities: Shaping India ' s Form and Future presents theoretical and empirical research to address the shortcomings in India ' s present models and suggests reforms in the current approaches. It incorporates the economics of cities into the urban planning to address the issues in India ' s transition to a developed country. It also illustrates best practices from India and other countries to guide reforms in urban planning and development in this country.

The book's aim is to draw together the economics literature relating to planning and set it out systematically. It analyses the economics of land use planning and the relationship between economics and planning and addresses questions like: What are the limits of land use planning and the extent of its objectives?; Is the aim aesthetic?; Is it efficiency?; Is it to ensure equity?; Or

sustainability?; And if all of these aims, how should one be balanced against another?
