International Economics, the best-selling textbook in the field, is written by two of the world's preeminent economists. Both the real trade portion of the book and the monetary portion are divided into a core of chapters focused on theory, followed by chapters applying the theory to major policy questions, past and current.

In the present text the author deals with both conventional and new approaches to trade theory and policy, treating all important research topics in international economics and clarifying their mathematical intricacies. The textbook is intended for undergraduates, graduates and researchers alike. It addresses undergraduate students with extremely clear language and illustrations, making even the most complex trade models accessible. In the appendices, graduate students and researchers will find self-contained treatments in mathematical terms. The new edition has been thoroughly revised and updated to reflect the latest research on international trade.
