Abstract. ISO 7500-1:2015

specifies the calibration and  
verification of

tension/compression testing

machines. The verification

consists of: - a general inspection  
of the testing machine, including

its accessories for the force

application; - a calibration of the

force-measuring system of the

testing machine; - a confirmation

that the performance properties of the testing machine achieve the limits given for a specified class.

## ISO 7500-1:2015 - Techstreet

ISO 7500-1 describes the verification and calibration of the force measurement system for uniaxial static testing machines in tension/compression of metallic materials. Such verification is performed by means of tension and/or compression load cells previously calibrated and classified according to ISO 376 Standard. ISO 7500-2 describes the verification of force applied by uniaxial creep testing machines in tension of metallic materials.
