An engine control unit, also commonly called an engine control module or powertrain control module, is a type of electronic control unit that controls a series of actuators on an internal combustion engine to ensure optimal engine performance. It does this by reading values from a multitude of sensors within the engine bay, interpreting the data using multidimensional performance maps, and adjusting the engine actuators. Before ECUs, air–fuel mixture, ignition timing, and idle speed were ...

Control Modules are rare components that can be found in Neptune, Europa and the Void, dropping from enemies and containers. They are usually found in quantities of 1 to 3, and are most commonly obtained by defeating the Hyena Pack (Psamathe, Neptune). Although classified as rare components, their higher-than-normal drop chance in the Void makes it easy to acquire a large amount of Control Modules after a few Void missions.
