The injection molding machine consists of the injection unit and the clamping unit, and their features are described below.

1 • 1 Injection unit

1) Injection capacity The proper injection capacity is found from the relationship of the molding machine capacity for the weight of 1 shot as shown in Figure 1 • 1-2. It is necessary to select the molding machine that satisfies the capacity of the shaded area.

Different machine types can fit in different spaces. Depending on your space requirements, there is a machine for you. The desktop injection molding machines are small injection molding machines and will fit on top of a desk. It is better for smaller spaces and smaller runs of molds. The benchtop injection molding machine is a large stand-alone machine that needs more space to function but can do larger runs.
