Munkres - Topology -
Chapter 3 Solutions
Section 24 Problem

24.3. Solution: Define $g: X \rightarrow \mathbb{R}$ where $g(x) = f(x)$ if $x \in A$ and $g(x) = f(x) + 1$ if $x \in B$. $i: \mathbb{R} \rightarrow \mathbb{R}$ is the identity function. Since f and $i: \mathbb{R} \rightarrow \mathbb{R}$ are continuous, g is continuous by Theorems 18.2(e) and 21.5. Since X is connected for all three possibilities given in this problem and \mathbb{R} is

ordered, the intermediate-value theorem applies. For $X = [0; 1]$, observe that $g(0) = 0 \dots$

~~Munkres Topology~~

~~Chapter 3 Solutions~~

intervals are convex, the subspace topology on $(a, b) \times (0, a \times t)$ is the order topology [Thm 16.4] so $(a, b) \times (0, a \times t)$ is homeomorphic to $(0, 1)$.

Online Library

Munkres

From this we see that any two points in L are contained in an interval homeomorphic to $(0,1)$ and therefore there is a continuous path between them. (f).

Suppose that L is 2nd countable. Then also $S = \{a$
