Our Final Invention: Artificial Intelligence and the End ...

James Barrat's Our Final Invention: Artificial Intelligence and the End of the Human Era is a disturbing, plangent response to the rosy-minded, "rapture of the nerds" mentality that has recently swept across the futurist landscape. Toeing the line between rational prudence and alarmist hand-wringing, Barrat makes the case not only that advanced artificial intelligence is just around the corner, but also that its chances of causing humanity's extinction are much higher than anyone ...

James Barrat, author of *Our Final Invention: Artificial Intelligence and the End of the Human Era* shared insights into his book on a recent AI Today podcast. Despite the title of the book, he is...

Is AI Our Final Invention? - Forbes

OUR FINAL INVENTION. Artificial Intelligence helps choose what books you buy, what movies you see, and even who you date. It's in your smart phone, your car, and it has the run of your house. It makes most of the trades on Wall Street, and controls our transportation, energy, and water infrastructure. Artificial Intelligence is for the 21st century what electricity was for the 20th and steam power for the 19th.

(PDF) Our Final Invention: Artificial Intelligence and the ...

Our Final Invention in Artificial Intelligence Our Final Invention does an excellent job of explaining these and other technical AI details, all while leading a grand tour of the AI world. This is no dense academic text.

Our Final Invention: Is It Artificial Intelligence ...

Our Final Invention: Artificial Intelligence and the End of the Human Era is a 2013 non-fiction book by the American author James Barrat. The book discusses the potential benefits and possible risks of human-level or super-human artificial intelligence. Those supposed risks include extermination of the human race.

Our Final Invention - Wikipedia

Although Our Final Invention summarizes the last 15 years of academic research on risks from advanced AI, it reads more like a thrilling detective story. The rumor went like this: a lone genius had engaged in a series of high-stakes bets in a scenario he called the AI-Box Experiment. In the experiment, the genius role-played the part of the AI.

Matt Miller: Artificial intelligence, our final invention ...

In the mid 21st century, humans succeed in creating our final invention: artificial intelligence. But intelligence can't be controlled, and as AI makes leaps and bounds ahead of its human creators, humans fight to prevent a war against their own creations. Can we coexist, or will we be the engineers of our own extinction?

coexist with beings whose intelligence dwarfs our own? And will they allow us to?

"A gifted and thoughtful writer, Metzl brings us to the frontiers of biology and technology, and reveals a world full of promise and peril." — Siddhartha Mukherjee MD, New York Times bestselling author of *The Emperor of All Maladies* and *The Gene* Passionate, provocative, and highly illuminating, *Hacking Darwin* is the must read book about the future of our species for fans of *Homo Deus* and *The Gene*. After 3.8 billion years humankind is about to start evolving by new rules... From leading geopolitical expert and technology futurist Jamie Metzl comes a groundbreaking exploration of the many ways genetic-engineering is shaking the core foundations of our lives — sex, war, love, and death. At the dawn of the genetics revolution, our DNA is becoming as readable, writable, and hackable as our information technology. But as humanity starts retooling our own genetic code, the choices we make today will be the difference between realizing breathtaking advances in human well-being and descending into a dangerous and potentially deadly genetic arms race. Enter the laboratories where scientists are turning science fiction into reality. Look towards a future where our deepest beliefs, morals, religions, and politics are challenged like never before and the very essence of what it means to be human is at play. When we can engineer our future children, massively extend our lifespans, build life from scratch, and recreate the plant and animal world, should we?

Super-Intelligent Machines combines neuroscience and computer science to analyze future intelligent machines. It describes how they will mimic the learning structures of human brains to serve billions of people via the network, and the superior level of consciousness this will give

# Read Free Our Final Invention Artificial Intelligence And The End Of Human Era James Barrat

them. Whereas human learning is reinforced by self-interests, this book describes the selfless and compassionate values that must drive machine learning in order to protect human society. Technology will change life much more in the twenty-first century than it has in the twentieth, and Super-Intelligent Machines explains how that can be an advantage.

“Startling in scope and bravado.” —Janet Maslin, *The New York Times* “Artfully envisions a breathtakingly better world.” —*Los Angeles Times* “Elaborate, smart and persuasive.” —*The Boston Globe* “A pleasure to read.” —*The Wall Street Journal* One of CBS News’s Best Fall Books of 2005 • Among *St Louis Post-Dispatch*’s Best Nonfiction Books of 2005 • One of Amazon.com’s Best Science Books of 2005 A radical and optimistic view of the future course of human development from the bestselling author of *How to Create a Mind* and *The Singularity is Nearer* who Bill Gates calls “the best person I know at predicting the future of artificial intelligence” For over three decades, Ray Kurzweil has been one of the most respected and provocative advocates of the role of technology in our future. In his classic *The Age of Spiritual Machines*, he argued that computers would soon rival the full range of human intelligence at its best. Now he examines the next step in this inexorable evolutionary process: the union of human and machine, in which the knowledge and skills embedded in our brains will be combined with the vastly greater capacity, speed, and knowledge-sharing ability of our creations.

A jaw-dropping exploration of everything that goes wrong when we build AI systems and the movement to fix them. Today’s “machine-learning” systems, trained by data, are so effective

## Read Free Our Final Invention Artificial Intelligence And The End Of Human Era James Barrat

that we've invited them to see and hear for us—and to make decisions on our behalf. But alarm bells are ringing. Recent years have seen an eruption of concern as the field of machine learning advances. When the systems we attempt to teach will not, in the end, do what we want or what we expect, ethical and potentially existential risks emerge. Researchers call this the alignment problem. Systems cull résumés until, years later, we discover that they have inherent gender biases. Algorithms decide bail and parole—and appear to assess Black and White defendants differently. We can no longer assume that our mortgage application, or even our medical tests, will be seen by human eyes. And as autonomous vehicles share our streets, we are increasingly putting our lives in their hands. The mathematical and computational models driving these changes range in complexity from something that can fit on a spreadsheet to a complex system that might credibly be called “artificial intelligence.” They are steadily replacing both human judgment and explicitly programmed software. In best-selling author Brian Christian’s riveting account, we meet the alignment problem’s “first-responders,” and learn their ambitious plan to solve it before our hands are completely off the wheel. In a masterful blend of history and on-the ground reporting, Christian traces the explosive growth in the field of machine learning and surveys its current, sprawling frontier. Readers encounter a discipline finding its legs amid exhilarating and sometimes terrifying progress. Whether they—and we—succeed or fail in solving the alignment problem will be a defining human story. The Alignment Problem offers an unflinching reckoning with humanity’s biases and blind spots, our own unstated assumptions and often contradictory goals. A dazzlingly interdisciplinary work, it takes a hard look not only at our technology but at our culture—and finds a story by turns harrowing and hopeful.

# Read Free Our Final Invention Artificial Intelligence And The End Of Human Era James Barrat

New York Times Best Seller How will Artificial Intelligence affect crime, war, justice, jobs, society and our very sense of being human? The rise of AI has the potential to transform our future more than any other technology—and there's nobody better qualified or situated to explore that future than Max Tegmark, an MIT professor who's helped mainstream research on how to keep AI beneficial. How can we grow our prosperity through automation without leaving people lacking income or purpose? What career advice should we give today's kids? How can we make future AI systems more robust, so that they do what we want without crashing, malfunctioning or getting hacked? Should we fear an arms race in lethal autonomous weapons? Will machines eventually outsmart us at all tasks, replacing humans on the job market and perhaps altogether? Will AI help life flourish like never before or give us more power than we can handle? What sort of future do you want? This book empowers you to join what may be the most important conversation of our time. It doesn't shy away from the full range of viewpoints or from the most controversial issues—from superintelligence to meaning, consciousness and the ultimate physical limits on life in the cosmos.

The human brain has some capabilities that the brains of other animals lack. It is to these distinctive capabilities that our species owes its dominant position. Other animals have stronger muscles or sharper claws, but we have cleverer brains. If machine brains one day come to surpass human brains in general intelligence, then this new superintelligence could become very powerful. As the fate of the gorillas now depends more on us humans than on the gorillas themselves, so the fate of our species then would come to depend on the actions of

# Read Free Our Final Invention Artificial Intelligence And The End Of Human Era James Barrat

the machine superintelligence. But we have one advantage: we get to make the first move. Will it be possible to construct a seed AI or otherwise to engineer initial conditions so as to make an intelligence explosion survivable? How could one achieve a controlled detonation? To get closer to an answer to this question, we must make our way through a fascinating landscape of topics and considerations. Read the book and learn about oracles, genies, singletons; about boxing methods, tripwires, and mind crime; about humanity's cosmic endowment and differential technological development; indirect normativity, instrumental convergence, whole brain emulation and technology couplings; Malthusian economics and dystopian evolution; artificial intelligence, and biological cognitive enhancement, and collective intelligence.

Explores universal questions about humanity's capacity for living and thriving in the coming age of sentient machines and AI, examining debates from opposing perspectives while discussing emerging intellectual diversity and its potential role in enabling a positive life.
