Science students are expected to produce lab reports, but are rarely adequately instructed on how to write them. Aimed at undergraduate students, *Successful Lab Reports* bridges the gap between the many books about writing term papers and the advanced books about writing papers for publication in scientific journals, neither of which gives much information on writing science lab reports. The first part guides students through the structure as they write a first draft. The second part shows how to revise the report and polish science writing skills as the student continues to write science lab reports.

Active learning exercises help engage the kinesthetic learner with labeling, drawing, and build-your-own-summary-table exercises that students can complete as they read the text. Available with the textbook at no additional cost as downloadable PDF worksheets in the Study Area of MasteringA&P.
