This application guide provides a method for the relay to detect the loss of communication between the relay and the RTAC. This is accomplished using custom IEC 61131 heartbeat logic in the RTAC and SELogicsettings in the relay to diagnose the absence of heartbeats.

compiles information on the application considerations of protective relays to ac transmission lines. The guide describes accepted transmission line protection schemes and the different electrical system parameters and situations that affect their application. Its purpose is to provide a reference for the selection of relay schemes and to assist less experienced protective relaying engineers in their application.

Each protection relay supply is separately protected (fuse or MCB) and continuously supervised to ensure security of the VT output. An alarm is given on failure of the supply and where appropriate, unwanted operation of the protection is prevented x Trip power supplies to the two protection types should be separately protected (fuse or MCB) .
