PSTricks is only fully compatible with TeX systems using PostScript intermediates, including but not limited to eTeX and others. However, it is not compatible with the widely used pdfTeX engine in PDF mode. As pdfTeX is the default engine in most current installations, users of PSTricks must either force pdfTeX to DVI mode or use auto-pst-pdf.

PSTricks allows us to include PostScript images directly into LaTeX and TeX documents. Unlike PGF/TikZ, which is a programming language in itself, PSTricks is a set of macros built over the language PostScript. PSTricks was originally developed by Timothy Van Zandt. High quality vector graphics images can be produced by using PSTricks.

The PStricks macros cannot be used with pdf (La)TeX, because PStricks uses PostScript arithmetic, which isn't part of PDF. There are several more or less good possibilities to get a PDF output from PostScript. The absolute easiest way is using the sequence latex->dvips->ps2pdf. When using a GUI, e.g. TeXnikCenter, there is often a button for this.
