Questions And Answers
& Set Practice

Set Theory Problems:
Solutions 1. True.

Where To Download Set

Suppose $(a;c) \supseteq A \cup C$.

Then $a \supseteq A$ and, since $A \cap B = \emptyset$, we have that $a \supseteq B$.

Similarly, $c \supseteq C$ and $C \cap D = \emptyset$ implies $c \supseteq D$.

Therefore, $a \supseteq B$ and $c \supseteq D$, so $(a;c) \supseteq B \cup D$. We may conclude that $A \cup C \subseteq B \cup D$.

2. True. There are many such bijections; the following is just one example. Define the function $f : (0;1) \rightarrow \mathbb{R}$ by $f(x) = \tan(\frac{\pi}{2}(x - \frac{1}{2}))$.

3.

True. Suppose not.

MATH 574, Practice
Problems Set Theory
Problems

Solved basic word
problems on sets: 1. Let
A and B be two finite
sets such that $n(A) = 20$,
 $n(B) = 28$ and $n(A \cap B) = 36$, find $n(A \cup B)$.

Solution: Using the
formula $n(A \cup B) = n(A) + n(B) - n(A \cap B)$.

Where To Download Set

$$\begin{aligned} \text{then } n(A \cup B) &= n(A) \\ &+ n(B) - n(A \cap B) = 20 \\ &+ 28 - 36. = 48 - 36. = \\ &12. \end{aligned}$$

By 1900, set theory was recognized as a distinct branch of mathematics. At just that time, however, several contradictions in so-called naive set theory were discovered. In order to eliminate such problems, an axiomatic basis was developed for the theory of sets analogous to that developed for
