Mobile Telecommunications in a High Speed World tells the story of 3G and higher-speed mobile communication technologies. Over ten years have passed since the first third-generation (3G) licences were awarded following debates about the merits of auctions versus 'beauty contests' then, nothing much happened. More licences were issued, a few roll-outs commenced and everyone began to think it had all been a horribly expensive mistake. That may still turn out to be the case, but in the meantime there have been massive developments in terms of the number of licences and launches worldwide, in the range of services that can be accessed, in the range of devices that can be used to access them, in operator strategies etc. Even the technology has improved considerably with 4G now under discussion. Much of this story has been chronicled, largely on the Internet, but the information is in tens of thousands of bits and pieces and a large part of it is either misleading or just plain wrong. Here, Peter Curwen and Jason Whalley introduce the outcomes of research that has involved the compilation of a unique database which details every licence and launch worldwide involving 3G. The authors discuss the structure of the industry and the strategic behaviour of operators, as well as the social consequences of the spread of 3G. They examine the role of new entry upon competition, and present analysis of the main operators involved, the development of handsets and especially smartphones. A number of country case studies are included. This comprehensive and up-to-date volume includes a number of country studies and is written by two of the world's foremost researchers on this industry. Mobile Telecommunications in a High Speed World will serve the needs of students, academics and those involved, or contemplating involvement, with the telecoms industry. Why pay thousands of dollars to consultancies to separate the wheat from the chaff with respect to 3G when you can read this book.

A CHOICE Outstanding Academic Title 2013! Are we influenced by ads even when we fast-forward them? Do brands extend our personalities? Why do we spend more when we pay with a credit card? Psychological Foundations of Marketing considers the impact of psychology on marketing practice and research, and highlights the applied aspects of psychological research in the marketplace. This book presents an introduction to both areas, and provides a survey of the various contributions that psychology has made to the field of marketing. Each chapter considers a key topic within psychology, outlines the main theories, and presents various practical applications of the research. Topics covered include: Motivation: The human needs at the root of many consumer behaviors and marketing decisions. Perception: The nature of perceptual selection, attention and organization and how these perceptual processes relate to the evolving marketing landscape. Decision making: How and under what circumstances it is possible to predict consumer choices, attitudes and persuasion? Personality and lifestyle: How insight into consumer personality can be used to formulate marketing plans. Social behavior: The powerful role of social influence on consumption. This book will be of great interest to a diverse audience of academics, students and professionals, and will be essential reading for courses in marketing, psychology, consumer behavior and advertising.
